Two-sided Guild/Path selection at the start of every round. Both players lock independently before combat can begin.

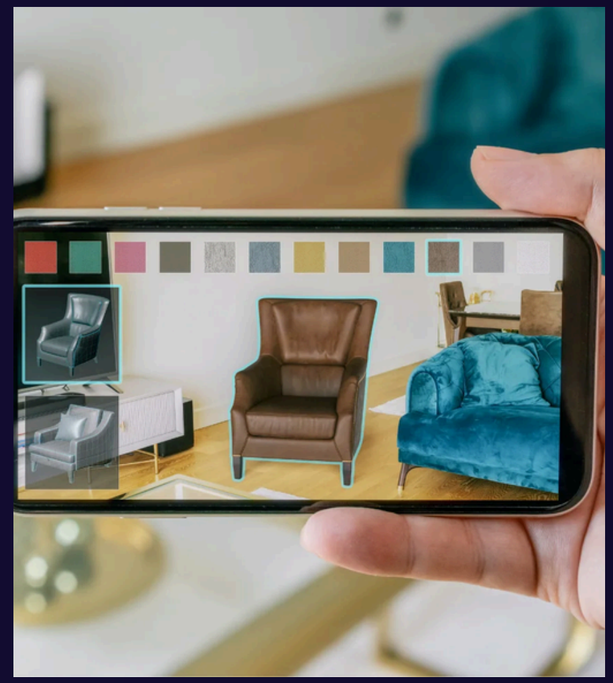
MAGIK- AAOH (AN AFFAIR OF HONOR)

COMPLETE ROUND LIFECYCLE

MULTIPLAYER RULE

ROUND START → GUILD
SELECTION → BOTH PLAYERS
LOCK → SYNCHRONIZE →
REVEAL → PLAYER TURN →
NEXT ROUND

Each device reveals only its own choice while selecting. The opponent is shown as CHOOSING... or LOCKED until both selections are finalized.



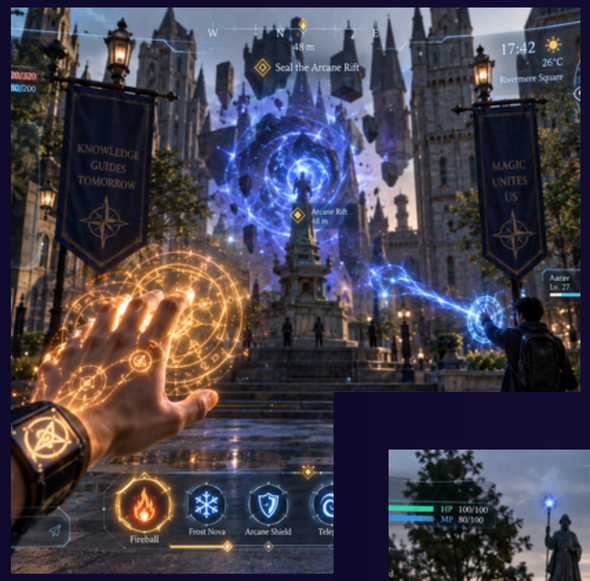
BATTLE STATE MACHINE

IF BOTH LOCK
GuildSelection → GuildSelectionResolved

BattleReady → RoundStart → GuildSelection →
WaitingForOpponentSelection → GuildSelectionResolved →
PlayerTurn → NextTurn → PlayerTurn → RoundStart

IF ONE LOCKS
GuildSelection → WaitingForOpponentSelection →
GuildSelectionResolved

ROUND LOOP
After both turns finish → EndRoundAndAdvance() →
CurrentRound++ → fresh GuildSelection



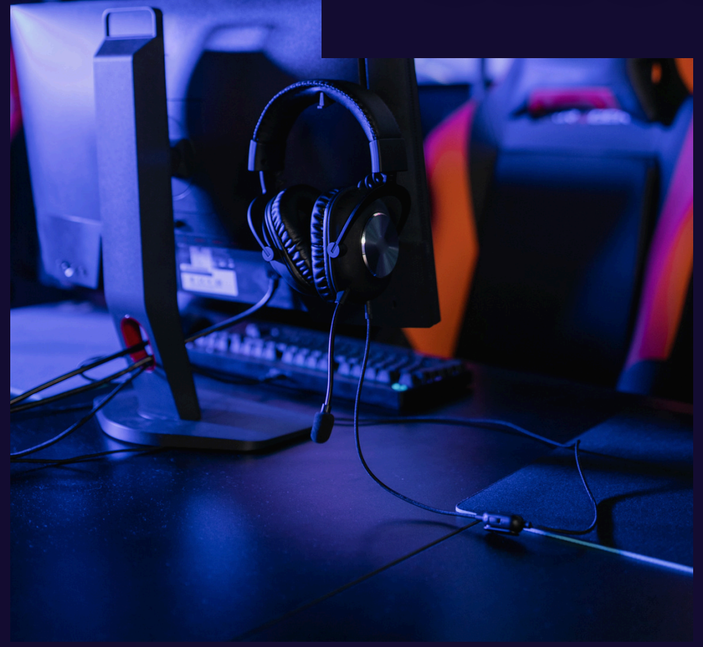
TWO-SIDED GUILD SELECTION HUD

ROUND {CurrentRound}: CHOOSE YOUR GUILD/PATH

- PLAYER 1
- Guild list • affinity • passive • archetype
- SELECT → CONFIRM / LOCK
- Status: CHOOSING... → LOCKED

- PLAYER 2
- Guild list • affinity • passive • archetype
- SELECT → CONFIRM / LOCK
- Status: CHOOSING... → LOCKED

GUILD APPLICATION & PRIVATE CHOICES



01 **PLAYER 1**

Private before reveal: Player 1 sees their own choice while Player 2 remains hidden.

02 **PLAYER 2**

Private before reveal: Player 2 sees their own choice while Player 1 remains hidden.

03 **REVEAL**

After both lock, reveal simultaneously: GUILDS LOCKED • PLAYER 1: [Guild] • PLAYER 2: [Guild]

AUTHORITATIVE BATTLE COORDINATOR

Wardiere Inc.

01.

Latency: buffer/interpolate on the client, but never let it decide outcomes

02.

Disconnects: coordinator must have a fallback (default action, graceful pause, or bot takeover)

03.

Late joins/reconnects: sync the current authoritative state to the rejoining client

SYNC RULE

PLAY WITH FRIENDS
start a battle in virtual environment anywhere

Tech Fit

Pairs well with voice/agent layers (e.g., LiveKit) since voice/chat state can stay client-side while battle logic stays authoritative

Works with any networking layer (Netcode for GameObjects, Mirror, Photon) as long as one side is designated "host authority"

Coded in C#

MADE WITH UNITY
